Canadian Beaver Training offers a wide range of technical courses in network administration, software programming, XML technologies, database servers, hardware and configuration as well as document management portals and enterprise application integration solutions.

Our technical courses are different because they can be customized to suit your own unique needs. All our technical offerings are based on the Choquette Technical Education System (CTES) curriculum.

When you call us for a Technical course, we will begin by introducing you to one of our professional and highly qualified Account Managers. Our Account Managers will assess your training requirement and make recommendations as to how to best achieve your stated objectives.

### **Our New By Request Services**

**Canadian Beaver Training** offer's a complete complement of courses. However we understand that sometimes our public schedule may not match yours. That's why we offer the By Request services. We will arrange to open a scheduled date just for you and use all of our resources to ensure the courses run on time and on schedule.

We have a 90% success rate.

This means that if you want to take advantage of our public course rates and you do not see a course title or scheduled date that you or your clients need (This pertains to all three streams of offerings posted at [www.cbit-ccti.com](http://www.cbit-ccti.com)) , email us the request with the name of the course required and number of participants who require this course and I will post this request on our Website.

We require 40 business days from your original request date in order to enable us to solicit other participants. If you have more than 1 registration then we are able to do so within a 30 business day timeline.

**Canadian Beaver Training** also offers custom 1on1 training, small and large group training session. We will work with you and your team to identify your specific training needs. We will perform a thorough analysis of your team's operational requirements in order to create a training solution that is right for you.

For more information or to register please contact us directly and we will assess your training requirements and make recommendations as to how to best achieve your stated objectives.
